

Mallet block

EH 3688.

Product Description

Possessing dimensions of L200mm, W140mm, and H40mm and a weight of 1,065g, the mallet block is made of a wear-resistant, durable, and medium hard special plastic. The mallet block is used to distribute the punctual impact force exerted by a hammer or crowbar head across a plain surface and to offset any differences in height. The block also allows for the creation of smooth transitions between pavement slabs or lawn and curb stone edges (preventing tripping hazards). Another advantage is the compaction of the substrate, preventing it from sagging later on. Finally, the block keeps stones and slabs perfectly protected from damage. The mallet block also serves as a sturdy support for other activities, e.g. upholstery work.

Product features:

- Made of wear-resistant, durable, and medium hard special plastic.
- Allows for the distribution of a punctual impact force across a surface and for the compensation of height differences to create smooth transitions.
- Sturdy and convenient support.
- Dimensions: L200mm, W140mm, and H40mm.
- Weight: 1,065g.

Application Areas

Road/walkway/green space construction

Material

- Special plastic
- wear-resistant
- durable
